Chonburi 20230, Thailand

Attention: John Lightbody

RE: Letter of recommendation.

Dear John,

EMCO Building has been using Global Engineering Co. for many years to assist in our steel framed projects and structures. They provide effective and efficient procurement of structural steel.

Global Engineer Co. have a strong and proficient shop detailing team where they provide detailed models and shop detailing of all parts of the structural steel elements. They provide good communication and support throughout the process, with willingness to run through each element and make adjustments and changes in a collaborative way.

Their process includes step by step timeline of the design, documentation, fabrication, packaging, shipping, and delivery to site. We have found this clear and effective. The Shipping timeframes have been accurate and reliable.

Our Engineers have been very happy with the quality and workmanship of the steel product, treatments, and welding. The final product has fitted together well and matched the shop drawings. Where a few minor issues have arisen, they have been dealt with quickly and efficiently with their local team.

We have found Global Engineering Co. good to work with, provide a professional service, quality documentation and quality product. EMCO and Global have formed a good relationship which works well for both parties and continues to grow with our projects and would be happy to recommend them.

Kind Regards,

A handwritten signature in blue ink that reads "AGoodsell".

Tony Goodsell
Senior Design Manager
