

To: John Lightbody
Siam Global Engineering

To whom it may Concern,

On behalf of AKT Engineering Pty Ltd I would like to take the time to acknowledge and highly recommend Siam Global Engineering based on the structural steel projects they have delivered to us to date.

On almost all of the projects we have engaged SGE on, we have had them provide structural shop modelling and drawings, which has been second to none in quality and turn around time, as well as their technical support and on site support that they are able to us, as well as directly to our clients to ensure a smooth programme.

SGE are consistently able to provide us with AS Grade material, whilst ensuring quality & compliance to the highest level required and always ensure a high level of fabrication quality in both workmanship & their documentation & traceability.

Over the course of the years we have been using SGE we have used them for countless different surface treatment profiles ranging from items as basic as Blast 2.5 & Primer coats all the way through to NACE certified painting systems 3+ coats & HD Galvanizing and have never had any quality or QA issues with the surface treatments.

Whilst being based over seas there is an extra layer of care that is always added into their packing & shipping procedures to ensure handling is as easy & safe as possible at every stage, as well as ensuring packing lists, layouts & documentation is all correct, easy to read and utilize, be it from the freight forwarder, transport companies, or final use on site. These accuracies in their work practices save untold amounts of time and create numerous efficiencies within the process and ensure everything runs smoothly.

Regards,

Tristan Hali
